

TRY IT AT HOME!

RAINBOW CROW

Draw a stick figure bird using a black marker (vis a vis works best) near the bottom of a coffee filter. Place the coffee filter into a cup with a small amount of water (the end of the coffee filter should just barely touch the water). What happens?

Black is really made up of many different colors. Chromatography is a technique used to separate parts of a mixture. In paper chromatography, you are separating the different colors that make up black.

Check out and read the book Rainbow Crow by Nancy Van Laan at the library.
